

SMARTTICKET

Support Operations Analytics Dashboard & SLA Analysis

Portfolio work sample — A self-created Python analytics project demonstrating how support-ticket data can be transformed into operational metrics, SLA monitoring, and management-ready insights.

300	73.3%	63	64
Total Tickets	SLA Compliance	SLA Breaches	Open Tickets

1. Business Problem

Support teams need to understand ticket status, resolution performance, and SLA compliance quickly. SmartTicket automates the analytical workflow: loading ticket data, calculating resolution time, checking SLA performance, and producing a dashboard for operational review.

2. What the Project Does

- 01 — Load:** Reads structured IT support-ticket data from CSV.
- 02 — Prepare:** Converts timestamps and calculates resolution time in hours.
- 03 — Analyze:** Classifies tickets as SLA Met, Breached, or Open.
- 04 — Visualize:** Generates KPI metrics and charts for operational review.

3. Key Findings

- **73.3%** of resolved tickets met their SLA target (173 of 236 resolved tickets).
- **63 tickets** were classified as SLA breaches, while **64 tickets** remained open.
- **Network** had the highest SLA breach rate in this dataset at **29.8%**.
- Network also had the highest average resolution time at approximately **10.4 hours**.

4. Dashboard Output

SMARTTICKET — SUPPORT OPERATIONS DASHBOARD

Ticket volume, SLA performance and resolution analysis

KEY INSIGHTS

- Overall SLA compliance is 73.3%.
- 63 tickets breached the SLA.
- 64 tickets remain open.
- Network has the highest breach rate (29.8%).
- Network has the highest average resolution time (10.4 hours).

SmartTicket • Support Operations Analytics

5. Tools & Portfolio Notes

Tools: Python • Pandas • Matplotlib • Google Colab

Data: 300 fictional IT support tickets created for portfolio demonstration; no confidential employer data used.

Outcome: A repeatable analytical workflow converting ticket-level data into SLA metrics, category-level performance analysis, and a management-ready dashboard.
